

## **FORENSIC DOCUMENT**

To,

The SHO,

PS Changanassery

Sub: Submission of Forensic Document of CNHB/58

Sir,

This report is on the impact of forensic evidence at murder trials. At these trials, forensic scientists testified on analytical results in the areas of DNA, ballistics, gunshot residue, latent prints, and trace evidence.

Other witnesses also testified at these trials for either the prosecution or defense: eyewitnesses who were at the scene when the murder took place, witnesses who heard something at the scene, and others who had knowledge about the circumstances or persons involved. A variety of witnesses—medical examiners, psychologists, and expert witnesses—also testified.

Homicide in Neighbourhood on 05-01-2024.

You are requested to register a FIR in the facts stated above and take criminal action against the person mentioned above and to protect the complainant from the said person.

Thanking you,

Dr. Shivaram

General Hospital, Kottayam.
